## Spray Enhancers

### Tank & Equipment Cleaner

#### What is it?

A powerful, granular tank and equipment cleaner for use both inside and outside of the sprayer.

#### Formulation

A dry granular formulation of powerful alkaline detergents.

#### Main Recommendations

Flush out sprayer, half fill spray tank, SLOWLY add Tank and Equipment Cleaner. Top up tank and agitate thoroughly. Open booms and spray out. With persistent chemicals/end of season storage, allow the mixture to stand overnight before emptying. Then flush out with clean water. If the sprayer is to be stored, do not flush out with clean water until just prior to re-use since Tank and Equipment Cleaner will leave a protective film.

#### Important information:

##### Disposal of spray tank washings

Under disposal of spray washing regulations, washings may be applied to the crop which has just been sprayed, provided that this does not exceed the maximum total dose for that crop. Because Tank and Equipment Cleaner is very effective, when used correctly it will remove/dislodge agrochemical residues "held" in the sprayer systems. This may be inappropriate for the crop just sprayed in terms of application timing, phytotoxicity or approval on that crop, unless the sprayer is cleaned between each crop type i.e. sugar beet and cereals.

In view of this we recommend:

- Start with a T&E cleaned sprayer
- After each use clean out with T&E Cleaner. The spray washings can be safely applied to the crop just sprayed provided that the dose does not exceed total approved dose for the crop.
- The maximum safe concentration for application to the crop is 0.1% w/v of Tank & Equipment Cleaner i.e. 1 kg Tank & Equipment Cleaner in 1,000 litres of tank washings.

#### Rate of Use

Routine rate - 500 g in 500 litres of water

Stubborn stains rate - 30 g in 10 litres of water

#### Water Volume

The maximum safe concentrate for application to the crop is 0.1% w/v of Tank and Equipment Cleaner i.e. 1 kg Tank and Equipment Cleaner in 1,000 litres of tank washings.

#### Mixing Sequence

Do not mix with any bleach based cleaner.

#### Pack Size

500 g
